

HI-1573, HI-1574

April 2015

MIL-STD-1553 3.3V Monolithic Dual Transceivers

DESCRIPTION

The HI-1573 and HI-1574 are low power CMOS dual transceivers designed to meet the requirements of the MIL-STD-1553 specification.

The transmitter section of each bus takes complementary CMOS/TTL Manchester II bi-phase data and converts it to differential voltages suitable for driving the bus isolation transformer. Separate transmitter inhibit control signals are provided for each transmitter.

The receiver section of the each bus converts the 1553 bus bi-phase differential data to complementary CMOS / TTL data suitable for input to a Manchester decoder. Each receiver has a separate enable input, which forces the receiver outputs to logic "0" (HI-1573) or logic "1" (HI-1574).

To minimize the package size for this function, the transmitter outputs are internally connected to the receiver inputs, so that only two pins are required for connection to each coupling transformer. For designs requiring independent access to transmitter and receiver 1553 signals, please contact your Holt Sales representative.

FEATURES

- Compliant to MIL-STD-1553A and B, ARINC 708A
- 3.3V single supply operation
- Smallest footprint available in 7 mm x 7 mm 44- pin plastic chip-scale package (QFN)
- Less than 0.5W maximum power dissipation
- Available in DIP and small outline (ESOIC) package options
- Industrial and extended temperature ranges
- Industry standard pin configurations

PIN CONFIGURATIONS

44 Pin Plastic 7mm x 7mm Chip-scale package (QFN)

20 Pin Plastic ESOIC - WB package

20 Pin Ceramic DIP package

HI-1573, HI-1574

PIN DESCRIPTIONS

PIN (DIP & SOIC)	SYMBOL	FUNCTION	DESCRIPTION
1	VDDA	power supply	+3.3 volt power for transceiver A
2	BUSA	analog	MIL-STD-1533 bus driver A, positive signal
3	BUSA	analog	MIL-STD-1553 bus driver A, negative signal
4	RXENA	digital input	Receiver A enable. If low, forces RXA and RXA low (HI-1573) or High (HI-1574)
5	GNDA	power supply	Ground for transceiver A
6	VDDB	power supply	+3.3 volt power for transceiver B
7	BUSB	analog	MIL-STD-1533 bus driver B, positive signal
8	BUSB	analog	MIL-STD-1553 bus driver B, negative signal
9	RXENB	digital input	Receiver B enable. If low, forces RXB and RXB low (HI-1573) or High (HI-1574)
10	GNDB	power supply	Ground for transceiver B
11	RXB	digital output	Receiver B output, inverted
12	RXB	digital output	Receiver B output, non-inverted
13	TXINHB	digital input	Transmit inhibit, bus B. If high BUSB, BUSB disabled
14	TXB	digital input	Transmitter B digital data input, non-inverted
15	TXB	digital input	Transmitter B digital data input, inverted
16	RXA	digital output	Receiver A output, inverted
17	RXA	digital output	Receiver A output, non-inverted
18	TXINHA	digital input	Transmit inhibit, bus A. If high BUSA, BUSA disabled
19	TXA	digital input	Transmitter A digital data input, non-inverted
20	TXA	digital input	Transmitter A digital data input, inverted

FUNCTIONAL DESCRIPTION

The HI-1573 family of data bus transceivers contains differential voltage source drivers and differential receivers. They are intended for applications using a MIL-STD-1553 A/B data bus. The device produces a trapezoidal output waveform during transmission.

TRANSMITTER

Data input to the device's transmitter section is from the complementary CMOS inputs TXA/B and TXA/B. The transmitter accepts Manchester II bi-phase data and converts it to differential voltages on BUSA/B and BUSA/B. The transceiver outputs are either direct- or transformer-coupled to the MIL-STD-1553 data bus. Both coupling methods produce a nominal voltage on the bus of 7.5 volts peak to peak.

The transmitter is automatically inhibited and placed in the high impedance state when both TXA/B and TXA/B are driven with the same logic state. A logic "1" applied to the TXINHA/B input will force the transmitter to the high impedance state, regardless of the state of TXA/B and TXA/B.

RECEIVER

The receiver accepts bi-phase differential data from the MIL-STD-1553 bus through the same direct- or transformer-coupled interface as the transmitter.

The receiver's differential input stage drives a filter and threshold comparator that produces CMOS data at the RXA/B and $\overline{RXA/B}$ output pins. When the MIL-STD-1553 bus is idle and RXENA or RXENB are high, RXA/B will be logic "0" on HI-1573 and logic "1" on HI-1574.

The receiver outputs are forced to the bus idle state (logic "0" on HI-1573 or logic "1" on HI-1574) when RXENA or RXENB is low.

MIL-STD-1553 BUS INTERFACE

A direct-coupled interface (see Figure 2) uses a 1:2.5 ratio isolation transformer and two 55 ohm isolation resistors between the transformer and the bus. The primary center-tap of the isolation transformer must be connected to GND.

In a transformer-coupled interface (see Figure 2), the transceiver is connected to a 1:1.79 isolation transformer which in turn is connected to a 1:1.4 coupling transformer. The transformer-coupled method also requires two coupling resistors equal to 75% of the bus characteristic impedence (Zo) between the coupling transformer and the bus.

Figure 3 and Figure 4 show test circuits for measuring electrical characteristics of both direct- and transformercoupled interfaces respectively. (See electrical characteristics on the following pages).

HOLT INTEGRATED CIRCUITS

HI-1573, HI-1574

HOLT INTEGRATED CIRCUITS

ABSOLUTE MAXIMUM RATINGS

Supply voltage (VDD)	-0.3 V to +5 V
Logic input voltage range	-0.3 V dc to +3.6 V
Receiver differential voltage	50 Vp-p
Driver peak output current	+1.0 A
Power dissipation at 25°C ceramic DIL, derate	1.0 W 7mW/°C
Solder Reflow Temperature	260°C
Junction Temperature	175°C
Storage Temperature	-65°C to +150°C

RECOMMENDED OPERATING CONDITIONS

Supply Voltage	
VDD	3.3V ±5%
Temperature Range	

Industrial	40°C to +85°C
Extended	55°C to +125°C

NOTE: Stresses above absolute maximum ratings or outside recommended operating conditions may cause permanent damage to the device. These are stress ratings only. Operation at the limits is not recommended.

DC ELECTRICAL CHARACTERISTICS

VDD = 3.3 V, GND = 0V, TA = Operating Temperature Range (unless otherwise specified).

PARAMETER	SYMBOL	CONDITION	MIN	ТҮР	MAX	UNITS
Operating Voltage	VDD		3.15	3.30	3.45	V
Total Supply Current	ICC1	Not Transmitting		4	10	mA
	ICC2	Transmit one bus @ 50% duty cycle		225	250	mA
	ICC3	Transmit one bus @ 100% duty cycle		425	500	mA

HI-1573, HI-1574

HEAT SINK - ESOIC PACKAGE

Both the HI-1573PSI/T/M and HI-1574PSI/T/M use a 20-pin APPLICATIONS NOTE thermally enhanced SOIC package. The HI-1573PCI/T/M and HI-1574PCI/T/M use a plastic chip-scale package (QFN). These packages include a metal heat sink located on the bottom surface of the device. This heat sink should be soldered down to the printed circuit board for optimum thermal dissipation.

& CHIP-SCALE The heat sink is electrically isolated and may be soldered to any convenient power or ground plane.

Holt Applications Note AN-500 provides circuit design notes regarding the use of Holt's family of MIL-STD-1553 transceivers. Layout considerations, as well as recommended interface and protection components are included.

THERMAL CHARACTERISTICS

RECOMMENDED TRANSFORMERS

The HI-1573 and HI-1574 transceivers have been characterized for compliance with the electrical requirements of MIL-STD-1553 when used with the following

transformers. Holt recommends the Premier Magnetics parts as offering the best combination of electrical performance, low cost and small footprint.

MANUFACTURER	PART NUMBER	APPLICATION	TURNS RATIO(S)	DIMENSIONS	
Premier Magnetics	PM-DB2725EX	Isolation	Dual ratio 1:1.79, 1:2.5	0.4 x 0.4 x 0.242 inches	
Premier Magnetics	PM-DB2702	Stub coupling	1:1.4	.625 x .625 x .250 inches	
Premier Magnetics	PM-DB-2791S	Isolation	1:2.5	0.4 x 0.4 x 0.185 inches

Premier Magnetics	PM-DB-2766	Isolation	Dual core 1:1.79	0.4 x 0.4 x 0.320 inches	

REVISION HISTORY

Document	Rev.	Date	Description of Change
DS1573	L	09/26/08	Clarification of transmitter and receiver functions in Description, clarification of available temperature ranges, and corrected a dimension in Recommended Transformers table.
	Μ	04/13/09	Add 'M' Flow option to chip-scale package (QFN). Clarify nomenclature of chip-scale package as QFN.
	Ν	07/24/09	Correct typographical errors in package dimensions.
	0	10/13/09	Clarified status of RXA/B and $\overline{RXA}/\overline{B}$ pins in bus idle state when RXENA or RXENB are high (logic "1").
	Ρ	01/26/12	Fix typos in tRG and tDT descriptions in AC characteristics table. Added latest Premier Magnetics transformer recommendations. Remove Technotrol transformer recommendations.
	Q	06/20/13	Updated functional description text for clarity. Revised figures 2,3, and 4. Updated package drawings.
	R	05/21/14	Updated Figure 2 and package drawings.
	S	04/09/15	Correct Figures 2 and 3. Other minor clarifications.
